### How To Create A Product Description

The extensive range of output modules and options make it possible to achieve all popular combinations of Volts and Amps. You can create your own Vega configuration online at <http://vega.emea.tdk-lambda.com/>. This method checks your configuration and offers the optimum solution. Alternatively, you can do this manually by using the guide below.

- Calculate total output power to select the appropriate converter, then select required Cooling, Connection, Leakage Current and Controls/ Signals from the following table:

- Select Output Modules and options from the Available Output Voltages tables.

Example - if you require 5V / 18A with output inhibit :-  
 a) Select 5L1S as closest match for voltage & current  
 b) add suffix 'N' for output inhibit if required (eg 5L1SN)  
 c) Repeat for other outputs.

Ensure you do not select more than a total of 5 slots width of modules. This will create a complete product description eg **V5FSSF 5L1SN 12/12H3/3S 24C5S** which represents a four output 550W VegaLite with Forward air, Screw terminal input, 1.5mA leakage, ac Fail, Global inhibit & 5V/100mA standby supply with the following outputs:

Output 1 = 5V/35A (with output inhibit, module good and current share option). Output 2 = 12V / 10A, Output 3 = 12V / 6A, Output 4 = 24V / 10A, all with screw terminal outputs.

- Contact TDK-Lambda to validate configuration and issue a part number.
