

CHO-SHRINK® 1061

Military/Aerospace Conductive Heat Shrinkable EMI Cable Shielding System

Tubing • Connector Boots • Cable Transitions • Boot Adapters

Customer Value Proposition

CHO-SHRINK 1061 is an electrically conductive, heat shrinkable material designed to provide lightweight cable and connector EMI shielding. CHO-SHRINK materials are ideal for any applications where weight savings associated with EMI cable shielding is of paramount importance. The product consists of polyolefin heat shrinkable tubing, connector boots, and transition pieces that are coated with Chomerics' unique silver filled coating system.

The CHO-SHRINK cable shielding system allows for relatively easy assembly of shielding systems for complex cable wiring harnesses using conventional heat shrink tubing heating devices. The system offers excellent shielding and significant weight savings over traditional metal braid cable shielding systems.

In addition, CHO-SHRINK offers an environmental shield against dust, moisture and other contaminants. CHO-SHRINK remains flexible to support any needed cable routing. Easy repair or rework of cables is facilitated by cutting off the CHO-SHRINK material and installing new material.

CHO-SHRINK materials are ideal for installation on cabling for medical device electronic assemblies which require reliable EMI shielding performance and may benefit from silver's antimicrobial properties.

Typical applications can include; missiles, aircraft, satellites, vehicles, and on cables of any other electronics systems where weight savings is mandatory.

Product Features

- Superior EMI shielding
- Meets NASA outgassing specs for space use
- Excellent 360° cable shielding effectiveness performance, 70 - 80 dB attenuation above 500 MHz
- Weight savings from 40 - 65% vs. conventional braided mesh shielding systems with labor savings as well
- Easy installation and assembly with conventional heat guns and ovens
- Professional appearance
- Excellent seal against moisture and contaminants
- Complex cable assembly EMI shielding possible with a wide selection of cable transitions, including T, Y, and other custom shapes.
- Standard (stocked) lengths for tubing are 4 feet. For longer lengths, transition tubing sections are available.
- Unique coating system can be applied internal or external to the heat shrinkable tubing
- CHO-SHRINK cable assemblies remain flexible after installation
- CHO-SHRINK connector boots provide EMI shielding, cable shield grounding, and strain relief at connector backshell terminations.
- CHO-SHRINK boots shrink to a wide range of cable diameters (shrink ratio is 4:1 at the cable end). They can be supplied with a conductive hot melt adhesive/sealant applied to each end.
- Mil-R-46846 Polyolefin Tubing and Boots

Application Instructions

- One of the major advantages of the CHO-SHRINK EMI cable shielding system over conventional metal shielding is its ease of assembly. The following has been prepared as a guide to the proper application and assembly of CHO-SHRINK tubing, connector boots, and transitions.
- All CHO-SHRINK products may be recovered (shrunk) with the same heating equipment used on ordinary nonconductive shrinkable plastics. Hot air blowers and infrared heating devices provide the simplest method of shrinking. Ovens may be used to recover tubing, but boots, transitions and other molded parts often require some hand positioning during the shrinking process to assure correct alignment. Shrink temperatures should not exceed 375°F. Care should be taken to shrink the product slowly and uniformly. Exceeding 375°F (191°C) may cause a loss of shielding integrity.
- To achieve a good mechanical grip between CHO-SHRINK boots and connector backshells, Chomerics strongly recommends the use of Shrink Boot Adapters, which provide a knurled and grooved surface to enhance resistance to torque, snap-off and pull-off stresses. Tie-wraps should also be applied.
- CHO-SHRINK molded parts are available with a highly conductive hot-melt adhesive/sealant at each opening. This hot melt will flow during shrinking to provide an effective environmental seal without degrading EMI shielding characteristics. If excess sealant flows outside the molded part during recovery, it can be easily wiped away while still warm.
- The only assembly procedure peculiar to CHO-SHRINK is the necessity to maintain electrical continuity through conductive inside surfaces from connector to connector. Where two CHO-SHRINK parts meet (boot/tubing, tubing/transition, etc.), a continuity splice must be achieved. This is accomplished by using CHO-SHRINK splice sleeves, which are short lengths of CHO-SHRINK tubing with a conductive outside surface.
- For optimal shielding performance, be sure to terminate the shield at both ends with full 360° contact to a low impedance ground. Incorporate mechanical strain relief into the cable design itself. That is, avoid stretching and bending the cable excessively. Transition pieces should be generous to preserve continuity at all junction points.

CHO-SHRINK Assembly Procedure

1. Lay out entire cable, with all branches in proper place.

2. Slide CHO-SHRINK continuity splice sleeves (coating outside, black inside) into position wherever connector boots or transitions will be shrunk against the cable.

3. Apply heat to shrink continuity splices tightly against wire bundle.

4. Slide pre-cut lengths of CHO-SHRINK tubing (inside-coated) into position so that ends overlap approximately one-half of each continuity splice sleeve. When determining cut-lengths, allow for a maximum of 5% longitudinal shrinkage.

5. Apply heat to shrink tubing against wire bundle. Approximately 1/2 to 1-1/2 inches of conductive surface should be exposed at each continuity splice.

6. Slide CHO-SHRINK transitions into position, bending branches where required to allow the expanded transition to pass breakout intersections. When properly positioned, exposed continuity splices should be entirely covered by the transition.

7. Apply heat to shrink transitions in place. During the shrinking process, transitions can be positioned by hand to assure correct alignment and convenient breakout angles. Ends of each transition should be pressed down onto the splice sleeve so that the conductive hot melt adhesive flows around each opening to provide a mechanical bond and seal. Note: Do not handle cables after transition shrinkage until cool.

8. If CHO-SEAL conductive grommets are to be used to terminate individual wire shields:
 - a. Strip outer jacket off each wire and cut shield away leaving 1/4" - 3/8" of shield exposed.
 - b. Comb exposed shield back over jacket.
 - c. Insert wires into grommet so that exposed shields are securely located in center of grommet.

9. Terminate connector. Note: If connector backshell does not provide a knurled and grooved surface for the CHO-SHRINK boot to grasp, a Shrink Boot Adapter should be installed on the backshell before wires are terminated (see table of Adapter sizes and part numbers).

10. Slide CHO-SHRINK boot over connector, and align so that boot will shrink over threads of backshell (or adapter) at one end and exposed continuity splice at other end.

11. Apply heat and begin shrinking boot at connector end first, using hands to assure proper positioning. Press boot tightly against backshell so that conductive hot melt adhesive provides mechanical bond and seal. Continue shrinking boot, working from connector towards cable. Press "tail" end of boot down against exposed splice so that conductive hot melt bonds and seals.

Product Information

Typical Properties	CHO-SHRINK® 1061: CHO-SHRINK Boots	CHO-SHRINK® 1061: CHO-SHRINK Tubing
Boot Material	Heat shrinkable polyolefin per MIL-R-46846 Type 5	
Conductive Filler	Silver in polyolefin	
Shore D Hardness (ASTM D-676)	50 ±10	
Operating Temperature Limits	-55°C to 150°C (-67°F to 300°F)	-54°C to 135°C (-66°F to 275°F)
Dielectric Strength* (ASTM D-876)	200 V/mil	
Shrink Temperature	121°C (250°F) min. 191°C (375°F) max.	
Outgassing (NASA Reference Publication 1124) (ASTM E595)

SHRINK BOOT ADAPTERS

Proper termination of Chomerics' CHO-SHRINK boots requires a Shrink Boot Adapter threaded onto the connector backshell. This adapter provides a knurled surface which increases resistance to torque loads, and a groove which accepts the lip on a CHO-SHRINK boot. The following table gives adapter sizes and part numbers for circular MS connectors. Chomerics does not supply these adapters. We refer you to Electro-Adaptor, Inc* for the sizes shown in the table below.

Connector Size				Dimensions (inches)				Fits CHO-SHRINK P/N

CHO-SHRINK Glossary

Boot	A thick wall, molded heat shrinkable polyolefin part, with a conductive inside coating, that fits over a connector. Supplied with or without conductive hot-melt adhesive for mechanical stability and environmental sealing.
Splice	A short length of heat shrinkable polyolefin tubing with a conductive coating on the outside only. Primarily used to connect two inside coated pieces together for maintaining electrical continuity.
Transition	A thick wall, molded heat shrinkable polyolefin part, with a conductive inside coating, used at points where the cable branches (common transitions are "T" and "Y").
Tubing	A thin wall heat shrinkable polyolefin jacket with a conductive coating on the inside or outside surface (or both).

Other Cable Shielding Products Available from Chomerics

CHO-SORB®	EMI absorbers are ferrite cores which absorb emitted energy from data and power cables without affecting data transmission.
CHO-FOIL®	Shielding tape is a low cost metal foil backed with a highly conductive adhesive which provides EMI attenuation when wrapped around cables.
CHO-FAB™	Shielding tape is a low cost conductively coated fabric which provides EMI attenuation when wrapped around cables.
ZIP-EX -2®	Zippered cable shielding is a zippered or Velcro closure Ferrex® wire mesh and heavy-duty vinyl product for a shielded cable assembly suitable for wire bundles.
CHO-JAC®	Flat cable shield is an aluminum or copper foil with polyester dielectric cover for indoor flat cable shielding
SHIELD WRAP™	Knitted wire mesh tape wraps easily over cables and harnesses to reduce corona discharge in addition to providing EMI shielding.
Cable Grommets	Molded conductive elastomer components in lieu of connectors for cable shield grounding termination at enclosure walls
Connector Gaskets	Molded elastomers, screen mesh with impregnated elastomer, oriented wire in elastomer, conductive fabric over foam and conductive foam, die-cut bulkhead mount connector gaskets
Waveguide Gaskets	Molded conductive elastomers or mesh screen impregnated with conductive elastomer for standard waveguide flange gaskets

Parker - Chomerics - Who we are!

Parker Chomerics is a total solutions company built on core competencies in material science and process technology, serving as the basis for:

- Product development
- Custom engineered solutions
- Integrated electronics housings and displays
- Supply chain management

This material science and process technology is applied into many fields including EMI Shielding, Thermal Management, Optical Display Products, Engineered Plastics and Metal based Assemblies
