Subject: Embedded Vision Kits End-Of-Life

Reasons for discontinuation:

The **Basler Embedded Vision Kits** include all necessary components for evaluating Basler camera modules. In addition to the camera, the kits typically include a processing board, accessories such as lenses and cables, and ready-to-use software. These kits simplify the integration of camera modules into embedded vision systems.

The market for **Basler Embedded Vision Kits** has evolved quickly and focused on compatibility with well-known embedded processor brands. However, due to the growing number of processing options and no clear plug & play solution many customers have opted to use standard off-the-shelf GigE & USB3 cameras for their early development phases. This approach also allows for more flexible configurations, a larger sensor selection, and quicker turnaround. This, along with a rapidly changing technological landscape, has led to the decision to discontinue Basler Embedded Development Kits.

However, **all products** previously included in the **Basler Embedded Vision Kits** are still available for individual purchase.

Embedded Vision Kits

Model	Recommended Replacement	Last Time Buy Date	Final Ship Date	End of Product Support
